

SACRAN

~ Protect nature, Protect skin ~

What is SACRAN?

SACRAN is extracted from “Suizenji nori”!

SACRAN is natural polysaccharide which is extracted from “Suizenji nori”. It contains 11 polysaccharide, and its molecular weight is quite high in natural substances.

SACRAN has rich water retaining property and film forming ability comes from its fine network. It can be applied quite naturally on the skin and it does not show tacky feeling and is dried smoothly.

What is Suizenji nori?

“Suizenji nori” only lives in pure water in Kyusyu, Japan.

“Suizenji nori” has been used as luxury food in Japanese dishes, but Natural “Suizenji nori” is quite rare and listed in Red Data Book (by Ministry of the environment) as endangered species.

“Suizenji nori” was the gift to the emperor and even now, this is used as luxury food Japanese dishes. This contains rich minerals with proteins.

Our hope

With the lot of effort by local people, we have pure water with beautiful environment in Fukuoka and Kumamoto, this “Suizenji nori” farm made possible for stable supplying.

Pure natural water from Mt.Aso, Kyusyu is required to farm “Suizenji nori” - raw material of SACRAN. This natural water contains rich minerals, clean and its water temperature keeps at 18-20 °C. In recent years, spring water to farm “Suizenji nori” and surrounding environment faces the problem caused by river construction and development. To use “Suizenji nori” (SACRAN) supports to keep their original environment with beautiful nature.
