

DAITOSOL

Superior film former made by history and experience

Solid technology with long history

DAITOSOL series is functional film former developed by aqueous resin emulsion technology used in coating, construction, building material industry for a long time. Each customers' request is different and also market demand is changed. But we have solid technology, flexibility, deep support and we are developing over many decades not only for cosmetics but also for various industries.

Large selection

There are 2 long selling grades which were developed at the beginning. Now, we developed more than 10 grades to meet market trend which is moving in fast paced. Required function for film former is various, such as water resistancy, flexibility and tackiness. We can work for each customers' requirement and make it possible.

Application

Film former is widely used in cosmetics applications, such as eyeliner, mascara, lip products and nail products. The function of film former can be also worked for skin care products, such as peeling and lifting. Our development does not stop as same as cosmetics are kept evolving. We are developing products to be used in various industries as well as cosmetics field.
