

## ENVIRONMENTAL POLICY

Daito Kasei develops an environmental policy for its activities and products based on the following principles:

- Conduct business activities and operations in compliance with all relevant environmental laws and regulations
- Prevent accidental pollution
- Minimize the environment impact of our products during their total life cycle
- Supply to our customer products in compliance with the applicable regulations and respectful to environment

Daito Kasei is committed to reduce the environmental impact of its activities and its products:

- Sustainability requirement has become an important criterion for the raw material and supplier selection process. We are concerned about preventing resources from depletion and we are trying since several years to select ingredients from green chemistry
- We manage our activities to avoid causing environmental pollution. We are using chemicals and we implement appropriate procedures for their handling and disposal
- We promote environmental awareness among employees
- Daito Kasei has a particular focus on minimizing energy use and water consumption and on reducing its carbon footprint. We analyze regularly our processes to identify and evaluate options to reduce energy consumption, improve productivity from the same level of resources
- We continually take into account regulatory changes, client expectations, technical and scientific innovations to improve our environmental strategy
